

**SP CUSTOM HANDWOUND PICKUPS WIRING INFORMATION**

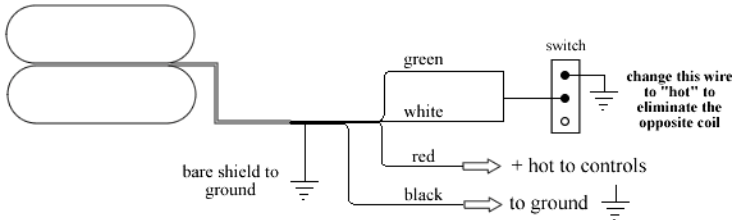

2 conductor vintage braided wire

4 conductor full humbucker operation (series)

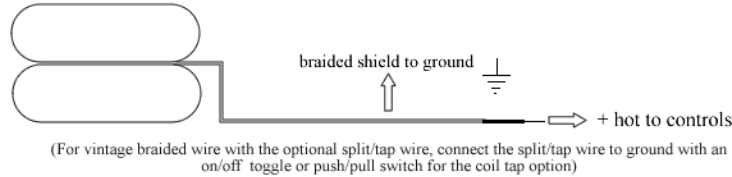

4 conductor full humbucker operation (series) w/coil tap switch  
use spdt mini toggle switch on/on

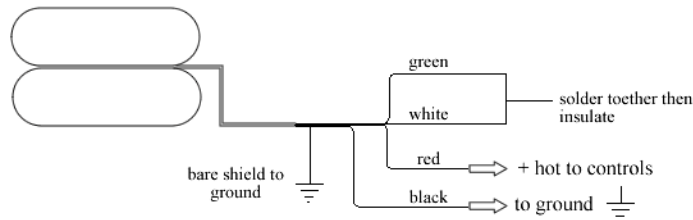

**SP CUSTOM HANDWOUND PICKUPS WIRING INFORMATION**

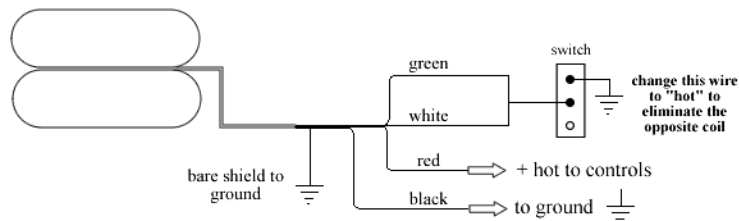

2 conductor vintage braided wire

4 conductor full humbucker operation (series)

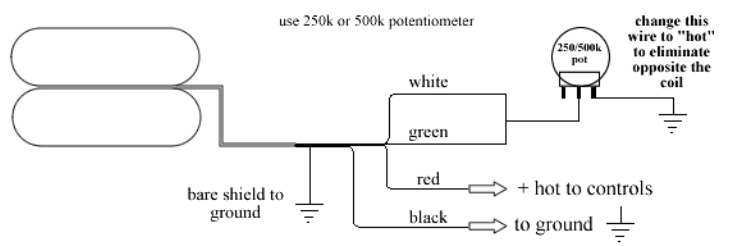

4 conductor full humbucker operation (series) w/coil tap switch  
use spdt mini toggle switch on/on

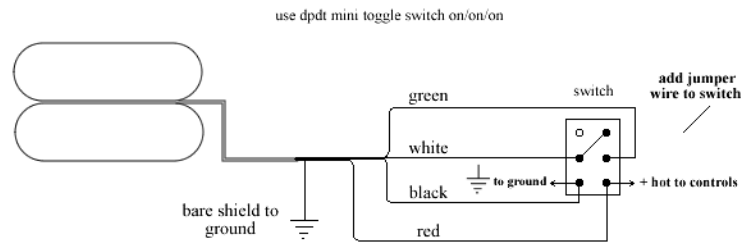

**SP CUSTOM HANDWOUND PICKUPS WIRING INFORMATION**

4 conductor full humbucker operation (series) w/variable coil tap

4 conductor humbucker series/split/parallel operation (switchable)

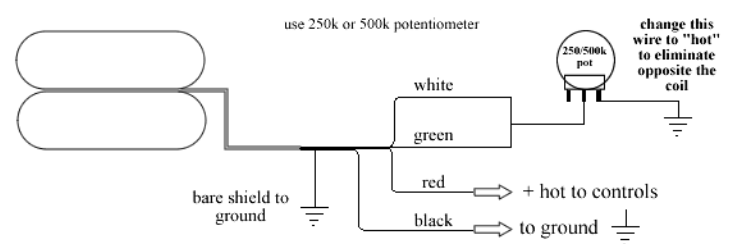

**NOTES**

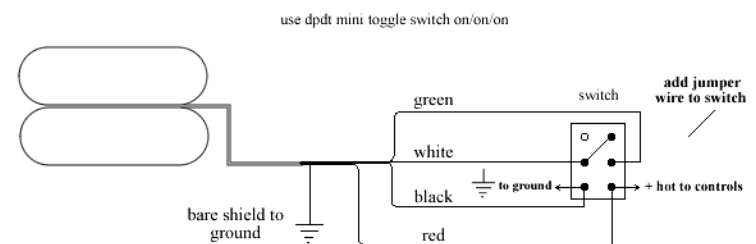

Coil tapping eliminates one coil by grounding it out, giving the pickup a single coil tone. This also disables the hum-cancelling capabilities of the pickup.  
Connections to ground are soldered to any pot casing which in turn should be part of the main ground.  
When wiring 2 pickups follow directions as stated previously for proper operation of any pair  
Series operation is standard full humbucker, tapped/split operation is 1 coil by itself, and parallel operation is both coils with more of an open "Strat" tone
